Portfolio objectives & investment policy

The portfolio aims to provide capital growth over the medium to long-term by investing in a diversified range of assets and markets worldwide. The portfolio is actively managed, investing in funds across the sustainability spectrum including ESG integrated, screened, sustainability themed and impact strategies. Assets can invest in a range of investment vehicles such as collective investment schemes, closed ended investment schemes, real estate investment trusts and exchange traded funds which themselves invest worldwide in any of the following: 1. equity or equity related securities; 2. fixed income securities (including government bonds and corporate bonds); 3. currencies; and 4. alternative assets. Alternative assets may include funds that use absolute return strategies or funds that invest indirectly in real estate and commodities.

This portfolio is part of the Schroder International Sustainable range which offers four portfolios with different expected combinations of investment risk and return. The portfolio aims to be the second highest risk portfolio in the range with the second highest equity weighting. Please note, the risk level of this portfolio has a target average annual volatility (a measure of how much the portfolio's returns may vary over a year) over a rolling five year period of between 65% to 80% of that of global stock markets (represented by the MSCI All Country World index). However, it is important to note that volatility is only one measure of risk.

Past performance is not a guide to future performance and may not be repeated. The value of investments and the income from them may go down as well as up and investors may not get back the amounts originally invested. Exchange rate changes may cause the value of investments to fall as well as rise.

GBP | Data as at 31.12.2024

1 year return of GBP 10,000

The chart is for illustrative purposes only and does not reflect an actual return on any investment.

Returns are calculated bid to bid (which means performance does not include the effect of any initial charges), net income reinvested, net of fees.

Risk considerations

Capital Risk: All capital invested is at risk. You may not get back some or all of your investment.

Counterparty Risk: The portfolios may have contractual agreements with counterparties. If a counterparty is unable to fulfil their obligations, the sum that they owe to the portfolios may be lost in part or in whole.

Derivatives Risk: Derivatives, which are financial instruments deriving their value from an underlying asset, may be used to manage the portfolio efficiently. The portfolio may also materially invest in derivatives including using short selling and leverage techniques with the aim of making a return. A derivative may not perform as expected, may create losses greater than the cost of the derivative and may result in losses to the fund.

Equity Risk: Equity prices fluctuate daily, based on many factors including general, economic, industry or company news.

Leverage Risk: The portfolio uses derivatives for leverage, which makes it more sensitive to certain market or interest rate movements and may cause above average volatility and risk of loss.

Money Market & Deposits Risk: A failure of a deposit institution or an issuer of a money market instrument could have a negative impact on the performance of the portfolios.

Negative Yields Risk: If interest rates are very low or negative, this may have a negative impact on the performance of the portfolios.

Interest rate risk: The portfolios may lose value as a direct result of interest rate changes.

Currency risk: The portfolio may lose value as a result of movements in foreign exchange rates, otherwise known as currency rates.

Liquidity risk: In difficult market conditions, the portfolio may not be able to sell a security for full value or at all. This could affect performance and could cause the portfolio to defer or suspend redemptions of its shares, meaning investors may not be able to have immediate access to their holdings.

Credit risk: A decline in the financial health of an issuer could cause the value of its bonds to fall or become worthless.

High yield bond risk: High yield bonds (normally lower rated or unrated) generally carry greater market, credit and liquidity risk.

Performance risk: Investment objectives express an intended result but there is no guarantee that such a result will be achieved. Depending on market conditions and the macro economic environment, investment objectives may become more difficult to achieve.

Sustainable investing risk: The portfolio applies sustainability criteria in its selection of investments. This investment focus may limit the portfolio's exposure to companies, industries or sectors and the fund may forego investment opportunities that do not align with its sustainability criteria chosen by the investment manager. As investors may differ in their views of what constitutes sustainability, the fund may invest in companies that do not reflect the beliefs or values of any particular investor.
