### Fund objectives and investment policy

The fund aims to provide capital growth in excess of the MSCI All Country World (Net Total Return) Index (after the deduction of fees) over any three to five year period by investing in equities of companies worldwide which the investment manager classifies as sustainable. These are companies that, through the way they are managed and/or the goods and services that they sell, make a positive contribution to the planet (the environment); and/or people (employee wellbeing; customer wellbeing; healthy, inclusive and connected communities; and/or effective and accountable institutions).

**Above is the Investment Objective of the fund. For details on the full fund's Investment Policy please see the KIID.** The Fund is actively managed and invests at least 80% of its assets in a concentrated portfolio of equity and equity related securities of companies worldwide. The Fund only invests in companies that have a positive rating based on the Investment Manager's sustainability criteria.

**Relevant risks associated with an investment in this fund are shown below and should be carefully considered before making any investment. Past Performance is not a guide to future performance and may not be repeated. The value of investments and the income from them may go down as well as up and investors may not get back the amounts originally invested. Exchange rate changes may cause the value of investments to fall as well as rise. Performance data does not take into account any commissions and costs, if any, charged when units or shares of any fund, as applicable, are issued and redeemed.**

## Risk considerations

**Concentration risk:** The fund may be concentrated in a limited number of geographical regions, industry sectors, markets and/or individual positions. This may result in large changes in the value of the fund, both up or down.

**Currency risk:** If the fund's investments are denominated in currencies different to the fund's base currency, the fund may lose value as a result of movements in foreign exchange rates, otherwise known as currency rates. If the investor holds a share class in a different currency to the base currency of the fund, investors may be exposed to losses as a result of movements in currency rates.

**Derivatives risk:** Derivatives, which are financial instruments deriving their value from an underlying asset, may be used for investment purposes and/ or to manage the portfolio efficiently. A derivative may not perform as expected, may create losses greater than the cost of the derivative and may result in losses to the fund.

**Higher volatility risk:** The price of this fund may be more volatile as it may take higher risks in search of higher rewards, meaning the price may go up and down to a greater extent.

**Liquidity risk:** The fund invests in illiquid instruments, which are harder to sell. Illiquidity increases the risks that the fund will be unable to sell its holdings in a timely manner in order to meet its financial obligations at a given point in time. It may also mean that there could be delays in investing committed capital into the asset class.

**Market risk:** The value of investments can go up and down and an investor may not get back the amount initially invested.

**Operational risk:** Operational processes, including those related to the safekeeping of assets, may fail. This may result in losses to the fund.

**Performance risk:** Investment objectives express an intended result but there is no guarantee that such a result will be achieved. Depending on market conditions and the macro economic environment, investment objectives may become more difficult to achieve.

**Sustainable Investing risk:** The fund applies sustainability criteria in its selection of investments. This investment focus may limit the fund's exposure to assets, companies, industries or sectors and the fund may forego investment opportunities that do not align with its sustainability criteria chosen by the investment manager. As investors may differ in their views of what constitutes sustainability, the fund may invest in companies that do not reflect the beliefs or values of any particular investor.

## Climate dashboard

### Carbon Metrics

● Fund ● Benchmark

### Fossil Fuel Exposures

● Fund ● Benchmark

Source: MSCI. Carbon Intensity is based on reported scope 1 & 2 emissions. Fossil Fuel Exposure charts for sub-funds apply a revenue-based exclusion on companies operating in the coal sector. Please refer to the fund prospectus for more details on exclusions. Benchmark used is the MSCI All Country World Index (ACWI). Source: MSCI. The graphs above include the Weighted Average Carbon Intensity (WACI), carbon footprint and energy exposure of the fund and its benchmark, where applicable. WACI and carbon footprint are based on Scope 1, 2 and 3 emissions. WACI measures the carbon-intensity of the portfolio by assessing the ratio of emissions to revenue generated from underlying investee companies. Carbon footprint normalises the total carbon emissions of the portfolio to its market value. When calculating carbon metrics, Schroders will exclude neutral assets (such as cash) and other non-eligible assets. This means that Schroders aggregates company-level GHG emissions based on the portfolio's eligible assets only (which are listed equity and credit holdings, where applicable). The energy exposure metrics are calculated based on the revenue generated from these activities by the underlying investee companies and weighted by the fund's holdings. Fund exposure to 'Coal' represents Thermal Coal mining and reflects investments in companies whose coal-related revenues are below the accepted threshold. Please refer to the fund sustainability disclosures for more details on exclusions. All metrics use reported company data. Where data may not be available, then MSCI may use estimates. Benchmark used is the MSCI All Country World Index (ACWI).

### Information relating to changes in fund manager, investment objective, benchmark and corporate action information

#### Benchmarks: (If applicable)

Some performance differences between the fund and the benchmark may arise because the fund performance is calculated at a different valuation point from the benchmark. The target benchmark has been selected because it is representative of the type of investments in which the fund is likely to invest, and it is, therefore, an appropriate target in relation to the return that the fund aims to provide. The investment manager invests on a discretionary basis and there are no restrictions on the extent to which the fund's portfolio and performance may deviate from the benchmark. The investment manager will invest in companies or sectors not included in the benchmark in order to take advantage of specific investment opportunities.
