Schroder ISF* Sustainable EURO Credit

Fund Manager: Saida Eggerstedt

Fund update: July 2026

Marketing material for professional clients only.

Market Review

Global bond markets faced several challenges in July. Bond yields rose, continuing to track energy prices closely. Renewed US-Iran tensions drove oil prices higher, with Brent crude briefly touching just over $100 a barrel, as investors priced in fresh risks of disruption in the Strait of Hormuz and the wider region. Corporate bonds initially held up well, however renewed geopolitical escalation and the subsequent jump in oil prices and government bond yields tested that resilience as the month progressed.

European credit registered negative total returns, although spreads ended the month marginally tighter, outperforming government bonds. Performance diverged notably by sector and duration, with spreads in technology-related credit particularly long-dated issues widening sharply as investors questioned whether AI-related capital expenditure (capex) had moved too far.

The catalyst for this sell-off was the unexpected $25bn issue in several tranches from Amazon, priced at a significantly higher yield for the long-dated bonds, which drew the weakest demand this year and raised concerns about the risk appetite among investors to absorb further large-scale AI-related supply from hyperscalers. These concerns were heightened by second quarter results from Alphabet as although earnings and revenues exceeded forecasts, Google's parent company announced a substantial upward revision in capex guidance for the year.

The second quarter earnings season in Europe highlighted divergence between sectors, with particular strength in energy – buoyed by higher oil prices – and in financials, notably banks which have benefitted from growth in net interest margins. Capital goods sectors also highlighted strong revenue growth, boosted by the data centre build out. By contrast, autos and consumer cyclicals have been facing substantial headwinds, with several consumer names downgrading annual forecasts due to rising energy costs and competitive pressures.

Softer eurozone inflation data in early July initially encouraged bond markets to scale back some of the interest rate hikes priced in over the next 12 months, with both the headline and core consumer price indices (CPI) surprising on the downside. However, the subsequent surge in oil and European natural gas prices reversed that narrative. Meanwhile, the European Central Bank (ECB) kept its deposit rate at 2.25% in line with expectations. However, the ECB did little to push back against market pricing for further interest rate rises, given resilient growth with the second quarter GDP figure highlighting the eurozone economy grew by 0.4% led by Spain, while the German, French and Italian economies all expanded. Against this backdrop, government bond yields climbed to multi-year highs.

Drivers of Fund Performance

The Fund posted a negative return but outperformed the benchmark during July (gross of fees).

Security selection in real estate and subordinated insurance was positive for returns, as names benefitted from positive quarterly earnings. Selective underweight allocations within telecoms proved additive. The fund remains relatively defensively positioned, and underweight duration positioning was positive for relative returns.

Avoidance of alcohol and tobacco results in an underweight to consumer non cyclicals, which detracted from a sector allocation perspective. The fund's off-benchmark high yield exposure also detracted slightly.

*Schroder International Selection Fund is referred to as Schroder ISF throughout.

Schroders

Portfolio Activity

The investment strategy focuses on a broad range of sustainable themes and bonds, including waste recycling and biodiversity, sustainable infrastructure, the circular economy, and responsible consumption. We also prioritize opportunities in decarbonizing technology and health and education. In alignment with our commitment to sustainability, we exclude investments in fossil fuels, weapons, alcohol, tobacco, and companies that violate the UN Global Compact.

We increased exposure within European banking, consumer goods and financial services, adding to some of our higher conivction names. We also took advantage of an opportunity in the telecom sector participating in new issues from a US giant. We added new single-A issues from a US investment bank, driven by a strong balance sheet and robust debt-servicing capabilities.

We gained exposure to a green hybrid issued by one of the largest German utility supply issuers where proceeds are being channeled into large-scale sustainable infrastructure, specifically focusing on expanding renewable energy generation via onshore and offshore wind farms and photovoltaic plants, upgrading and digitalising power grids to handle decentralized energy, and scaling up nationwide electric vehicle (EV) fast-charging infrastructure.

The fund's carbon emissions intensity, as measured by tonnes CO2e per $mn sales (scope 1 and 2 emissions), is less than half that of the reference index. Additionally, our overall SustainEx™ impact score remains significantly higher, as we strive to identify improvers, limit laggards, conduct ESG research, utilize tools, and focus on positive sustainability themes. The fund also maintains a sizeable allocation of 35% to green, social, and sustainable bonds.

Outlook/positioning

Given the eurozone's reliance on energy imports, the region has been doubly affected since the outbreak of the Middle East conflict by the closure of the Strait of Hormuz due to the impact on natural gas prices, which are crucial for electricity supplies and for heating.

While inflationary pressures had eased with the announcement of a ceasefire between in the Middle East between the US and Iran, the flash headline CPI data published at the end of July highlighted the impact of a renewed rise in energy prices following the recent re-escalation in the conflict.

With the clear risk that the conflict could become more prolonged, the ECB is likely to be even more vigilant in monitoring the secondary impact of elevated energy prices, particularly on broader consumer prices and wage inflation. While the ECB's response to the inflationary impact of the Middle East conflict should be markedly less hawkish than four years ago following the outbreak of the Russia/Ukraine conflict in 2022, a further hike in interest rates in September now appears likely.

Nevertheless, while European bond markets are likely to remain driven by global events, credit fundamentals in Europe remain broadly solid, with strong balance sheets and limited refinancing risks overall. However, euro investment grade credit spreads at historically tight levels do not warrant adding risk and we have been very selective in the primary market, focusing on opportunities that provide good carry and favourable underlying credit fundamentals.

[1]Benchmark refers to ICE BofA Euro Corporate TR EUR.

Investment Objective

The fund is actively managed and invests at least two-thirds of its assets in bonds denominated in or hedged to Euro issued by companies and other nonsovereign bond issuers, governments, government agencies and supranationals worldwide.The fund maintains a higher overall sustainability score than ICE BofA Euro Corporate index, based on the investment manager's rating system. The fund invests at least 10% of its assets in green, social and/or sustainable bonds.

Risk Considerations

ABS and MBS risk: The fund may invest in mortgage or asset-backed securities. The underlying borrowers of these securities may not be able to pay back the full amount that they owe, which may result in losses to the fund.

Capital risk / distribution policy: As the fund intends to pay dividends regardless of its performance, a dividend may represent a return of part of the amount you invested.

Contingent convertible bonds: The fund may invest in contingent convertible bonds which are bonds that convert to shares if the bond issuer's financial health deteriorates. A reduction in the financial strength of the issuer may result in losses to the fund.

Counterparty risk: The fund may have contractual agreements with counterparties. If a counterparty is unable to fulfil their obligations, the sum that they owe to the fund may be lost in part or in whole.

Credit risk: If a borrower of debt provided by the fund or a bond issuer experiences a decline in financial health, their ability to make payments of interest and principal may be affected, which may cause a decline in the value of the fund.

Currency risk: If the fund's investments are denominated in currencies different to the fund's base currency, the fund may lose value as a result of movements in foreign exchange rates, otherwise known as currency rates. If the investor holds a share class in a different currency to the base currency of the fund, investors may be exposed to losses as a result of movements in currency rates.

Currency risk / hedged share class: The currency hedging of the share class may not be fully effective and residual currency exposure may remain. The cost associated with hedging may impact performance and potential gains may be more limited than for unhedged share classes.

Derivatives risk: Derivatives, which are financial instruments deriving their value from an underlying asset, may be used for investment purposes and/ or to manage the portfolio efficiently. A derivative may not perform as expected, may create losses greater than the cost of the derivative and may result in losses to the fund.

High yield bond risk: High yield bonds (normally lower rated or unrated) generally carry greater market, credit and liquidity risk meaning greater uncertainty of returns.

Interest rate risk: The fund may lose value as a direct result of interest rate changes.

Liquidity risk: In difficult market conditions, the fund may not be able to sell a security for full value or at all. This could affect performance and could cause the fund to defer or suspend redemptions of its shares, meaning investors may not be able to have immediate access to their holdings.

Market risk: The value of investments can go up and down and an investor may not get back the amount initially invested.

Operational risk: Operational processes, including those related to the safekeeping of assets, may fail. This may result in losses to the fund.

Performance risk: Investment objectives express an intended result but there is no guarantee that such a result will be achieved. Depending on market conditions and the macro economic environment, investment objectives may become more difficult to achieve.

Sustainability risk: The fund has environmental and/or social characteristics. This means it may have limited exposure to some companies, industries or sectors and may forego certain investment opportunities, or dispose of certain holdings, that do not align with its sustainability criteria chosen by the investment manager. The fund may invest in companies that do not reflect the beliefs and values of any particular investor.

Additional Disclosures

The disclosures below cover Schroders' proprietary sustainability tools, third-party index and data providers, and related EU regulatory requirements. Each disclosure applies only to the extent that the relevant tool output, index, data, ESG rating or content actually appears in this material. Their inclusion is not intended as, and should not be read as, a sustainability-related claim or an indication that any particular index or data source has been used

For EU/EEA readers: any ESG ratings within the meaning of Regulation (EU) 2024/3005 contained herein are issued by Schroder Investment Management (Europe) S.A., 5, Heienhaff, L-1736 Senningerberg, Luxembourg. For further information, please go to https://www.schroders.com/en/global/individual/sustainability/sustainability-policies-disclosures-and-reports/.

SustainEx™ provides an aggregate estimate of the social and environmental costs and benefits that an issuer may create. It does this by scoring the issuer against a list of indicators – scores may be positive (for example, when an issuer pays more than average living wages) or negative (for example, when an issuer emits carbon). The result is expressed as an aggregate score of the sustainability indicators for each issuer, specifically a notional percentage (positive or negative) of sales or GDP of the relevant underlying issuer. SustainEx™ utilises and is reliant on third party data (including third party estimates) as well as Schroders' own modelling assumptions, and the outcome may differ from other sustainability tools and measures.

Where SustainEx™ relies on data and estimates produced by third parties, Schroders cannot and does not warrant the accuracy, completeness and adequacy of such third party data and estimates.

Like any model, SustainEx™ will evolve and develop over time as Schroders continues to assess, refine and add to the metrics and their relative contributions. Generating SustainEx™ scores involves an element of judgment and subjectivity across the different metrics chosen by Schroders, and accordingly Schroders does not accept any liability arising from any inaccuracy or omission in, or the use of or reliance on, SustainEx™ scores.

As the model evolves, changes made to how metrics are applied may result in changes to the SustainEx™ score of any issuer and ultimately the overall fund/portfolio score. At the same time, of course, the issuer's SustainEx™ performance might improve or deteriorate.

Schroders' proprietary sustainability tools including SustainEx™ may not cover all of a fund/portfolio's holdings from time to time, in which case Schroders may use a range of alternative methods to assess the relevant holding. In addition, certain types of assets (such as cash) are treated as neutral and are therefore not considered by our proprietary tools. Other types of assets such as equity indices and index derivatives may not be considered by our proprietary tools and in such case would be excluded from a product's sustainability score.

CONTEXT™ is a proprietary tool used by Schroders to support the analysis of companies' and issuers' management of the environmental, social and governance trends, challenges and opportunities that Schroders believes to be most relevant to that company's or issuer's industry. It provides access to a wide range of data sources chosen by Schroders. Any views or conclusions integrated into Schroders' investment-decision making or research by fund managers or analysts through the use of CONTEXT™ will reflect their judgement of the sustainability of one or more aspects of the relevant company's or issuer's business model, rather than a systematic and data-driven score of the company or issuer in question.

NatCapEx™ provides an estimate of the potential "impact" that an issuer may create in terms of net nature-related environmental "costs" or "benefits" of that issuer. It does this by using certain metrics with respect to that issuer, and quantifying them positively (for example by recycling plastics) and negatively (for example the non-GHG air pollutants an issuer emits) to produce an aggregate notional measure of the relevant underlying issuer's environmental "costs", "externalities" or "impacts". NatCapEx™ utilises and is reliant on third party data (including third party estimates) as well as Schroders' own modelling assumptions, and the outcome may differ from other sustainability tools and measures. Where NatCapEx™ relies on data and estimates produced by third parties, Schroders seeks to ensure that such data and estimates are accurate, but Schroders cannot and does not warrant the accuracy, completeness and adequacy of such third party data and estimates. Like any model, NatCapEx™ will evolve and develop over time as Schroders continues to assess, refine and add to the metrics and their relative contributions. Generating NatCapEx™ scores involves an element of judgment and subjectivity across the different metrics chosen by Schroders, and accordingly Schroders does not accept any liability arising from any inaccuracy or omission in, or the use of or reliance on, NatCapEx™ scores. As the model evolves, changes made to how metrics are applied may result in changes to the NatCapEx™ score of any issuer and ultimately the overall fund/portfolio score. At the same time, of course, the issuer's NatCapEx™ performance might improve or deteriorate. Schroders' proprietary sustainability tools including NatCapEx™ may not cover all of a fund/portfolio's holdings from time to time, in which case Schroders may use a range of alternative methods to assess the relevant holding. In addition, certain types of assets (such as cash and certain equivalent securities) are treated as neutral and are therefore not considered by our proprietary tools. Other types of assets such as equity indices and index derivatives may not be considered by our proprietary tools and in such case would be excluded from a product's sustainability score.

ThemEx™ is part of Schroders' suite of proprietary sustainability tools. ThemEx™ seeks to measure the alignment of a company's products and services to a range of sustainable investment themes, including Schroders' Super Themes (Climate Change, Demographic Shifts, Natural Capital Management, Societal Change, Technological Innovation) and the United Nations' Sustainable Development Goals. Alignment is estimated systematically based on the company's revenue from its underlying business activities. We draw on a range of data sources including data we have collected and aggregated ourselves. The model output estimates the degree to which business activities are positively or negatively aligned to super themes or the UN SDGs. Some business activities have complex and offsetting exposures which we aim to capture through alignment to multiple themes. Fertilisers, for instance, are positively aligned to reducing world hunger but this should be offset against the negative impacts on biodiversity. ThemEx™ will evolve and develop over time as Schroders continues to assess and refine the tool, including where applicable according to research and publications. As ThemEx™ is focused on revenue alignment from a company's products and services, there is no alignment for operationally focused SDGs such as SDG 13 – Climate Action.

Schroders' proprietary tools, including ThemEx™, may not cover all of a portfolio's holdings from time to time, in which case Schroders may use a range of alternative methods to assess the relevant holding. In addition, certain types of assets (such as cash) are treated as neutral and are therefore not considered by our proprietary tools.

Overall net scores are generated based on the output of Schroders' proprietary sustainability tool, ThemEx™, which seeks to measure the alignment of a company's products and services to a range of sustainable investment themes, including Schroders' Super Themes (Climate Change, Demographic Shifts, Natural Capital Management, Societal Change, Technological Innovation) and the United Nations' Sustainable Development Goals. It does this by aggregating company scaled revenue exposure to business activities; the result is expressed as a notional percentage (positive or negative) of scaled revenue of the relevant underlying company. For example, a company with a ThemEx™ net score of +100% has revenue from products and services that are deemed completely positively aligned with one or more sustainable investment themes. Where revenue is aligned with multiple themes, to avoid revenue overstatement at the net level, the net alignment strength for a business activity is limited to 1. This means that if a company has full positive alignment with two or more themes for a business activity, the revenue exposure is only considered once at the net level but accounted for in both themes in a theme view. As such, SDG and super theme breakdown scores may not necessarily total to the overall net score. Additionally, as the UN SDGs are not identical to Schroders' super themes, the overall SDG net score may not be the same as the overall theme net score in some cases.

Schroders' proprietary sustainability tools generate scores by using certain metrics and how scores are generated may change over time. Schroders' proprietary sustainability tools may utilise and be reliant on third party data (including third party estimates) as well as our own modelling assumptions, and the outcome may differ from other sustainability tools and measures. Schroders seeks to ensure that such third party data and estimates are accurate, but Schroders cannot confirm the accuracy, completeness and adequacy of such third party data and estimates. Generating scores involves an element of judgment and subjectivity by Schroders, and, as Schroders' proprietary sustainability tools evolve, changes made to how metrics are applied may result in changes to the score of any company. At the same time, of course, the company's performance might improve or deteriorate. A company will be scored across applicable metrics and may score higher or lower on some metrics than on others. The scores are combined to provide an overall net score for the issuer.
